No-Code Developer Implementation

Bubble Template: https://taskmanager-lite.bubbleapps.io/

00. Template Notes
a. The templates 'Manage Workspaces' will become 'Client Boards' and 'Project Board' only reachable by the Unscene Team and not clients.

b. Clients will have a log in button on our other content website which will lead them to the login/signup page of this platform. No need for landing pages. We will have a redirect to the-unscene.com once clients have signed out.

c. Media (such as Icons, Font, and Logos) to be provided upon project initiation.

01. Implementing the Provided User-Experience Design
We have provided a User-Experience Design in the form of PDFs that describe what is and is not visible to certain users on each page.

These User-Experience design documents may be missing some UI elements which can be found in the User-Interface elements document provided as a PDF.

02. Implementing the Provided User-Interface Design
We have provided the User-Interface elements which describe the visual look and feel of the platform. This included hover states of buttons and an example of a client screen.

03. Databasing for the Platform's User Roles and Media
We would like to investigate a Google Drive integration for the database of all user information if possible. The developer also needs to amend the template that is the provider database to accommodate the platform's requirements.

a. All clients must sign up to gain access or to invite team members to their accounts.
b. All Unscene team members must have an @the-unscene.com or @unscene.co.za email addresses to be added as Usncene Talent to the platform.
c. My email address will be registered as the first Node Admin (description of User roles to be found in briefing pack): chrisk@unscene.co.za

04. Subscription Service & Stripe Integration

The developer will need to assist us with the integration of payment methods and sign-ups with the Stripe platform. The Pricing Structure document will assist with the pricing of these packages.

Additional to the prices provided in the Pricing Structure document, we will be offering a 20% discount for annual subscriptions.

05. Logout Button

We have not yet included a logout button. Please advise where to add one.

06. Researching the Template of Choice

It might be worth investigating the chosen bubble template to ensure all is in order. We will purchase and provide the template once ready.

07. Email Notification with Dynamic Emails from [SendInBlue](#) API Integration -[https://bubble.io/plugin/sendinblue-smtp-1520524904151x89091494784637340 0](#) (might be useful)

    a. Transactional Emails for Design Brief Updated
    b. Transactional Emails for Team Member Additions or Removals
    c. Transactional Emails for Direct Messages on the Platform
    d. Transactional Emails for Post Mentions on the Platform
    e. SendInBlue Login Details will be provided upon project initiation.
    f. SMTP Details will be provided upon project initiation.

08. Email Notification with Dynamic Emails from Stripe API Integration

    a. Stripe Emails for Abandoned Cart
    b. Stripe Emails for Purchase Confirmation
    c. Stripe Emails for Subscription Suspension Reminder
    d. Stripe Emails for Invoicing
    e. Stripe Emails for Failed Payment
    f. Stripe Login Details will be provided upon project initiation.

09. Stripe API Integration

    a. We have a stripe account registered.
    b. We will need a customer portal integrated into the platform for sign-up and for the customer's account/subscription settings.
